

Health IT Solutions

Here at HealthDynamix, we understand that healthcare professionals need more than just products—they need complete solutions that address their organization's specific complexities.

Our client satisfaction is driven by 26 years of experience and a proven ability to address selection, implementation and technology adoption issues in healthcare. Our volume allows us to accomplish these objectives without a premium. Your dedicated Account Executive is ready to introduce you to our wide range of services and solutions designed to maximize the care that you provide.

Your Account Executive works with your organization to build customized IT Healthcare solutions that address specific needs.

Point-of-Care

HealthDynamix provides a full range of solutions in support of patient care. By examining the specific workflow of your organization, we can improve your process for technology selection. Our implementation services are targeted at improving the adoption of these technologies by your business units.

- Patient safety
- Carts and mounting systems
- Barcoding
- Mobility
- Wireless voice
- Biometrics

Transformation Services

We offer a broad range of transformation services designed to help your organization improve the delivery of HIT. These services allow you to separately address the individual elements—such as the people, process and technologies—associated with your organization and its workflow.

- Change management and adoption
- IT process consulting
- Workflow analysis
- Outsourcing consulting
- Network, data center and print assessments
- Procurement consulting
- Enterprise architecture and design

Data Center

HealthDynamix delivers data center solutions in support of both clinical and non-clinical applications. Architecture, design and assessment services are used to create a client roadmap that incorporates process, technology and service elements.

- Archiving
- Storage virtualization
- Information lifecycle management
- Clinical image management
- Disk and tape storage management
- Data migration and replication
- Networked storage (SAN and NAS)
- Server consolidation and virtualization
