

HealthDynamix Presents the Fujitsu PalmSecure Palm Vein Reader

If your fingerprint recognition hardware is returning too many false rejects and retinal scanners are too intrusive, PalmSecure is the right technology for you. A robust biometric authentication system, the PalmSecure reader scans live vein patterns in your hand to generate a unique digital ID. No more lost smart cards, no more forgotten passwords, and no more unintended privacy issues.

Your healthcare personnel can quickly and securely access sensitive records, while your IT staff can worry about issues more important than unauthorized file access.

PalmSecure biometrics help keep your healthcare environment more secure and more hygienic.

The spread of bacteria and viruses can be critically serious problem in hospitals and healthcare locales. The contactless biometric technology of PalmSecure is ideal for these environments.

Front-end biometric authentication helps to protect the records of your patients while helping you meet HIPAA compliance regulations.

FREE Webinar on Biometric Solutions for Healthcare IT

Contact your Account Executive today to schedule this FREE on-demand webinar on biometrics and healthcare IT. You'll learn more about PalmSecure vein recognition, biometric

accuracy and security, identity management, and current challenges in data access as they apply to the healthcare marketplace.
