

Carts & Mounting Systems

We know that healthcare professionals need more than just products. They need complete solutions that address specific complexities.

With the proliferation of electronic health records and technology-based treatments, today's clinicians are using mobile technology at the point-of-care more than ever. However, healthcare environments features a variety of challenges:

- Equipment in a clinical area being shared by multiple users daily
- The impact of mobile technology on workflow
- The impact of new technology on productivity
- High availability requirements for mobility solutions to remain a critical part of patient care

Mobile computer products facilitate clinical documentation at the point-of-care by combining maneuverable and flexible high-performance platforms and mobile battery systems. Configurable styles are maneuverable, durable, and customizable to your workflow processes.

Enhancing productivity, giving staff more flexibility, and maximizing ROI are key areas to consider when selecting mobile technology solutions. Increasing patient safety and hospital performance across all departments should be the largest driving factors when making mobile computing procurement decisions.

We will help you find mobile IT solutions for healthcare to you can bring advanced care directly to your patients.

IT Lifecycle Management

Streamlining patient data management and improving patient safety are HealthDynamix's goals when building mobile computing solutions. While HealthDynamix can provide any element from procurement to lifecycle support services, we feel it is important to provide a full solution.

This solution is created together with the clinicians, defining the workflow, listing the requirements, and working with procurement to ensure budgets and pricing are in line with the customer's business needs:

- Gather Requirements—we work with your clinicians, IT and procurement departments to better understand the solution required
- Product Evaluation—we help to narrow manufacturer lists to the products that best support your particular requirements
- Procurement—HealthDynamix supports specific fulfillment time frames while helping reduce procurement costs
- End-User Training—helpful e-learning and change management training and support
- Services and Support—product integration, deployment and a selection of multiyear support contracts for full lifecycle support

Full Services and Worry-Free Support

The healthcare industry continues to struggle with mobile technology due to specialized manufacturer maintenance needs or different models in the same environment. This technology is subject to more wear-and-tear, used by many different users, and must be available 24/7. Mobile system support services are an added complexity for an already overloaded IT department.

From standard break/fix support services that provide on-site technicians for common tasks like battery replacement, to the proactive monitoring of devices that allow technicians to remotely diagnose critical components before they fail so they can reduce downtime.

HealthDynamix can also provide preventative maintenance, worry-free full-service support contracts to replace common failure parts on a periodic basis during the product's lifecycle. We have developed a tiered, full-service support program to provide:

- Improved total cost of ownership
- Increased optimization
- Decreased downtime
- More time for IT to focus on core services
