

VIRTUAL CHIEF INFORMATION SECURITY

(i) ABOUT vCISO

There are three types of professional services that every business needs to protect its business and financial interests and minimize risks:

- an experienced law firm
- a good accountant
- o and in today's technology-driven world, an expert information security consultant.

To be relevant and responsible in a digital world, every business organization needs to commit to a robust information security program.

What if your business cannot afford or doesn't need a full- time Chief Information Security Officer (CISO) to address regulatory, security, and privacy requirements? You need options.

Through its on-demand virtual Chief Information Security Officer (vCISO) program, PCM can provide you options. PCM's vCISO program can be a cost-effective approach to having the access your company needs to high end security professionals. PCM's vCISO program provides

An extension of your security leadership team

 rj	

An Experienced security advisor working under your direction to analyze threats, develop security plans and ensure compliance.

Support on a regularly basis or for a specific project needs.

An extension of your security leadership team

This seasoned and experienced adviser is only the tip of our Subject Matter Expert (SME) pool you can draw talent from. Through your vCISO program, you will have priority access to our security, technology and compliance consultants and their deep knowledge of security risks, regulations and remediation. Many of these experts are former CISOs/CIOs as well as experienced senior consultants within your relevant business/industry. This access allows your vCISO consultant to provide a depth and breadth of knowledge that exceeds even the most exceptional on-staff information security officer.

PCM TECHNOLOGY VIRTUAL CHIEF INFORMATION SECURITY

Your organization has more digital assets than ever... that are worth more than ever... securing them is more important than ever.

A CISO FOR A FRACTION OF THE COST!

Our vCISO program can balance your needs with additional skilled, directed resources. Our recommendation to all our new clients is to begin with our 100 hour Start Up program. This gives you the opportunity to settle in with your new vCISO consultant without "clock–watching". You will have the option to specify the number of hours per month that matches your needs and resources, or bank the hours to be used for large projects. At any time, any of number of hours can easily be added to your account balance.

For instance, in the event of a cyber emergency

Do you know who to call?

Would you focus on system restoration or evidence preservation? Which State/Federal agencies need to be notified?

Are there regulatory requirements to alert authorities?

Do you know where to find essential documents, such as up-to-date calltrees, incident response plans, cyber insurance policies/riders, dataflow diagrams, etc.?

These, and more, are questions we will ask in our Incident Response (IR) Plan Review. Upfront, we dedicate a small number of your 100 retainer hours to conduct the IR plan review (12-20 hours) and run Incident Response Tabletop Exercises (4-8 hours). This is our opportunity to examine your business, it's operational structure and compliance obligations, to best mitigate your risks. This is your opportunity to get an up-close view of the expertise and value our IT security professionals will bring to your programs.
