

KINGSTON'S SECURE STORAGE

MINIMIZE THE RISK OF MOBILITY

Financial services firms are rapidly transitioning from stationary workplaces to environments that empower employees and contractors to work from anywhere – at the office, at home or on the road. But without taking measures to secure sensitive financial data, customer records or intellectual property, banks, brokerages, payment card companies, insurers and credit clearinghouses may find mobility brings more risk than they anticipated.

CAN YOU AFFORD THE COST OF NON-COMPLIANCE?

Financial services companies face a growing number of regulatory mandates for ensuring customer data and other information doesn't fall into the wrong hands. From the Gramm-Leach-Bliley Act (GLBA), Sarbanes-Oxley Act (SOX) and Payment Card Industry Data Security Standard (PCI DSS) to multiple state laws and the new European Union General Data Protection Regulation (GDPR), banks, insurers and other institutions face considerable penalties for non-compliance.

In fact, failing to comply with these regulations costs over 2.5 times more than the cost of compliance (2011 Ponemon Study). And while fines and penalties can hurt, they pale when compared to the cost to your brand and your business when customers fear they trust you with their personal information.

PRESERVE DATA, AND YOUR REPUTATION

With Kingston's encrypted USB drives which include industry favorites from IronKey, you can simplify compliance by relying on a full range of products that include the right solution to meet every need. Kingston's encrypted line of drives feature products that range from Entry level Alphanumeric keypad PIN protection all the way through FIPS 140-2 Level 3* validated, military-grade encrypted USB storage devices. Kingston lets you put a wall between unauthorized users and the data you need to protect.

Choose from an array of Kingston IronKey and DataTraveler solutions:

- Hardware based encrypted USB flash drives
- FIPS Certification 197 through 140-2 Level 3 (Drive specific)
- Device Management integration seamlessly through DataLocker EMS and SafeConsole products.
