

WINDOWS READINESS ASSESSMENT

Introduction

Windows 10 has been called “The Last Version of Windows” and it represents both a challenge and an opportunity for organizations that are making the transition to Windows as a Service. Traditional IT processes and frameworks must be adapted and modernized in order to simplify the deployment and management of Windows, increase security, lower the overall TCO and deliver a better experience for end users.

Windows 10 Readiness Assessment

Microsoft has developed new analytics and deployment capabilities that work together with enhanced management tools to reduce the complexity of the upgrade process. The Windows 10 Readiness Assessment from Stratiform includes a series of workshops and assessments to help you evaluate existing technologies, configurations, processes, devices and applications. We will deploy the latest Analytics tools from Microsoft, assess your environment and provide recommendations in order to optimize your Windows 10 deployment.

What's Involved

- ✓ We will perform an automated discovery which provides comprehensive estate inventory, including devices, applications and drivers.
- ✓ Applications will be rationalized and categorized, then compared with a massive compatibility database to provide actionable insight.
- ✓ Using data insights including application and add-on deployment footprint and usage information, we will prioritize the issues you need to focus on.
- ✓ We will develop a high-level deployment schedule that will enable you to maximize your application and driver testing efforts to drive an accelerated deployment.
- ✓ We will analyze your existing deployment toolset and provide recommendations to ensure you are following best practices for Windows 10 deployment and management.

Results

At the end of the engagement, Stratiform will provide a detailed Assessment and Roadmap document, along with a fully functional implementation of Windows Analytics that will serve as the command center for your Windows 10 upgrade. The Assessment and Roadmap will provide detailed guidance and recommendations to ensure you are positioned for a successful Windows 10 upgrade.

Cost

The cost for this engagement is \$3000. Terms and conditions may apply.
